Career Objectives:

With years of landscaping experience, I have been known as a reliable and hardworking groundskeeper experienced in providing grounds maintenance for residential and commercial properties. Skilled in mowing, trimming, planting, and landscaping, with a high knowledge in the use of various associated tools. However, at this stage of my life I am looking for a radical career change. In order to do that, I decided to take the Full Stack Web Development Bootcamp at Rutgers University and to become as proficient as I can be in the use of new technology. From my experience as a landscaper, I want to bring communication, customer service and problem-solving skills. I am eager to lend combined knowledge and skills to enhance business performance. I try my best to operate well in both individual and team capacities, leveraging seasoned work ethic to quickly adapt to different processes and drive company objectives.

Tech Skills:

- Responsive UI design
- Relational and non-relational databases
- Experience with the React library
- Using Node and Express.js in order to initialize servers and construct REST APIs
- Experience coding in JavaScript both for the front-end and the back-end of an application
- Some knowledge of Progressive Web Applications (PWAs) development, including the use of service workers and Caching strategies.
- Using the Git versioning system and the Bash terminal in general.

Education:

Dec 2023
